

# learning markdown in vscode

---

*sdjc* **csdc**

**sacsd** // use three \* to italicize and bold

**first,type two spaces and then press the enter to wrap the line make two line breaks to achieve a line break**

safsafa//type two ~ to achieve underline

---

//three \* separate line for dividing line

- sdcsd
- scdsc
- //        \* adding an space to achieve a unordered list

**two way to input spaces:**

1. sdf safsa    //using syntax in html : and
  2. using shift+space to switch to full angle mode
- 

- efewf
  - kskwndkw
    - cnsakcnskd
      - skjdnfke
      - csklcSDL

1. sdsdfsd
    1. csdjknscjkd
    1. ndajksnfasc
- 

**//use tab to achieve multiple lists**

fsdffsefc    //declare citation

```
#include<iostream>
using namespace std;
int main(){
    cout << "hello world";
}
```

//code block

$\times b$ //using two \$ to type formula

ajsfkjkhello  
//insert a link  
world^1  
insert a footnote

//insert a photo

name	age	score	s
damong	12		
fsdfwe	100		

//insert a table

- ☒ 这个是可以打勾的列表
